## Problem 2

There are $300 \mathrm{~cm}^{3}$ toluene of $0^{\circ} \mathrm{C}$ temperature in a glass and $110 \mathrm{~cm}^{3}$ toluene of $100^{\circ} \mathrm{C}$ temperature in another glass. (The sum of the volumes is $410 \mathrm{~cm}^{3}$.) Find the final volume after the two liquids are mixed. The coefficient of volume expansion of toluene $\beta=0.001\left({ }^{\circ} \mathrm{C}\right)^{-1}$. Neglect the loss of heat.
